CyberSaint
S E C U R I T Y

Headquartered in Silicon Valley, this cybersecurity software company and CyberSaint customer is combating the rapid shift to virtual infrastructure and disappearing network boundaries. Application weaknesses such as fileless and memory-based attacks run rampant, and this software company believes that a new approach is required to counter today's threats. The company's technology is the only way to precisely pinpoint threats at the source within business-critical applications. The solution provides a deterministic approach that stops threats in real-time, protects any application across the full application stack.

The company's world-class leadership team has solidified high-profile partnerships with the world's most innovative and global information technology companies, Fortune 250 power companies, national energy companies, and government agencies.

"[CyberStrong is] the single source of truth for compliance and risk management, as we have very large customers and highly regulated industries. If we didn't use this platform, we would waste large amounts of time. It would take us a lot of time to not even have half of what the platform provides, and we'd be using spreadsheets and manual processes. It works very well."
- Information Security Officer (ISO)

—— BUSINESS CHALLENGE

Implementing integrated risk management

Given the caliber of partnerships that this company has built in both Silicon Valley and globally, the leadership team was under pressure to develop an integrated risk management program that would not only secure critical information and enable trust, but also enable company growth and scale over time, all through with a means to articulate and illustrate that progress from the analyst level up to the C-Suite and the board.

The team needed a lightweight yet powerful tool to enable comprehensive auditing and the highest standard of compliance and oversight. Not only those critical capabilities but the team also recognized that they could not be slowed down by menial tasks such as report generation and visualization, the tool they used needed to support that as well.

Audit Management & Corporate Compliance Focus

For this technology company, the CyberStrong platform for both audit management and corporate compliance and oversight was perfect. The CyberStrong platform gave the audit team and senior leadership into the organization's security gaps through rapid visualization on the executive and management dashboards.

Since the CyberStrong platform is built on the gold-standard NIST CSF, all assessments (regardless of framework) are benchmarked against the CSF. This insight gave both the compliance team and leadership an increased level of confidence when speaking with partners in highly-regulated industries - soliciting existing partnerships and opening doors to new ones.

Outcomes from CyberStrong IRM

—— ENHANCED

Decision making with executive dashboards.

—— STREAMLINED

Partner relationships with automated reporting.

—— CREATED
Operational efficiencies by reducing redundancies.

From the ISO -

"Centralized location for all regulatory requirements, assessments, risk levels and insights"

Assessing product against NIST Cybersecurity Framework and NIST 800-53 (cross-walked)

"Get this product if you have any regulatory requirements or are in a highly regulated space, makes life so much easier"
