Digital Transformation for Cyber & IT Risk

Leverage Advanced Automation to Increase Cyber Maturity Amid Digital Transformation, Eliminating Manual Effort in Assessments and Saving Millions per Year.

As the only solution offering the level of assessment automation and visibility required to create a real-time, unified strategy around cyber risk, CyberStrong empowers security and risk leaders to finally realize their goals of mature continuous compliance and risk management from assessment to Boardroom. CyberStrong is built on patented automation that goes beyond that of legacy risk and compliance solutions, augmenting existing GRCs to deliver maximum ROI for the largest companies in the world. Used by industry-leading organizations to optimize resources resulting in millions of cost savings per year, CyberStrong's patented Natural Language Processing (NLP) automation, seamless integrations, and rapid implementation empowers security and risk leaders to transform cyber risk management in the wake of digitalization and provide tangible value to their enterprise.

Fortune 50 Automation Case Study (FMCG)

Goal: Gain risk visibility and improve accuracy in cyber/IT risk management; optimize resources in conjunction with broader Digital Transformation; Repurpose human capital away from manual assessments to proactive risk management that is communicated up to the executive and Board-level.

Tech Stack: RSA Archer, ServiceNow ITSM, 10+ Integrations

Sponsors: Board of Directors, CISO, CIO, CEO, Digital Innovation Team, Cyber Risk Team

Outcomes: CyberStrong saved the company millions by Digitally Transforming the legacy GRC stack. Automated assessments by 25% Y1, 50% Y2, 90% Y3.

Bar chart: Y1 $3M, Y2 $9M, Y3 $20M

Trusted by BOSE · Ameren · SIEMENS · DUKE ENERGY · Marathon Petroleum Corporation

"IT risk management vendors integrate and aggregate data, but do not have the ability to update the compliance standards in real time. CyberStrong takes these feeds and project them out across environments to the organization's assets, assessments and controls in real time without requiring an analyst to do this manually. At an industry level, there is currently a lack of best practice for mapping real-time telemetry into a control environment, CyberSaint is making more progress than most, especially compared to IT risk management vendors."
