

The CyberStrong Platform

The Leader in Cyber Risk Management

The CyberStrong platform is recognized as the only purpose-built Cyber Risk Management platform for enterprises. Improve cyber resilience by standardizing on industry frameworks, centralizing risk and compliance data, and automating the cyber risk management process at scale. The platform offers enterprises the true real-time, flexible, and intuitive solution to manage the entire cyber risk management lifecycle from assessment, to measurement and remediation. Leveraging patented automation, CyberStrong ingests data from the security tech stack and data lakes to score controls in real-time. NLP-backed crosswalking projects scores across regulatory frameworks and standards; all rolling up through varied risk models to executive dashboards for C-suite and Board review.

USE CASES

How Customers Leverage CyberStrong

- Automate assessments by up to 95% with Continuous Control Automation™, pulling in telemetry from the security stack to score controls automatically and continuously
 - Substantially increase assessment efficiency and save millions of dollars
 - Standardize on transparent cyber risk quantification methodologies such as FAIR or custom risk models
 - Roll up cyber risk data into quantitative and qualitative dashboards for C-Suite and Board review, including reports on cyber risk trending over time, framework maturity, top risks, and more
 - Harmonize compliance requirements allowing teams to assess once and gain credit for many, fulfilling controls across various standards at the same time via synced crosswalking
- Compare top unique risks and potential losses against industry peers by industry and company size, benchmarking against the most robust actuarial dataset for cyber risk events
