

CyberSaint Overview

CyberSaint's mission is to empower all organizations to build a cybersecurity program that is as clear, actionable, and measurable as any other business function. CyberSaint's CyberStrong platform is recognized as the only purpose-built integrated risk management platform that enables automated, intelligent cybersecurity compliance and risk management. Leveraging patented AI, Natural Language Processing (NLP) and Machine Learning (ML), CyberStrong adds an unprecedented level of automation to the assessment, remediation, and C-Level reporting process for enterprise organizations, CISOs, and teams. CyberSaint simplifies cybersecurity program management, enabling agility and alignment from assessment to Boardroom.

CyberStrong Use Cases

- **Automate** any compliance and/or risk assessment against any framework or standard
- **Harmonize** compliance requirements allowing teams to remediate once and gain credit for many, and automations to map once and fulfill many controls
- **Manage** risks dynamically as they are updated in real-time, and foster a risk-aware culture
- **Leverage** data coming from the security tech stack to automate compliance and update risks via integrations with vulnerability management platforms, threat intelligence platforms, SOAR, IAM, CWPP, Cloud Infrastructure and more
- **Measure** Return on Security Investment (ROSI) and standardize on risk quantification methodologies such as FAIR, NIST 800-30
- **Generate** automated reporting such as Plan of Action and Milestones (POAM), System Security Plan (SSP), Risk Assessment (RA), and NIST Scorecards among others
- **Illustrate** compliance and risk posture, gaps, and initiatives for improvement with fully customizable Governance Dashboards
- **Optimize** resources across people, process, and technology with solution-cost modeling

CyberSaint is an example of a technology provider that demonstrates a vision for addressing emerging risks associated with cybersecurity... its vision is built around simplifying cybersecurity program management for customers, which makes CISOs of large enterprises its primary buyers.

CyberSaint's innovation and agility, coupled with strong advanced analytics, has resulted in growth... CyberSaint's current "sweet spot" is large-scale projects that involve a high level of configuration or customization."
